Core technology provider Fidelity National Information Services (FIS), in conjunction with mobile banking technology providers ClairMail and mFoundry, has launched a new m-banking application.

FIS Mobile Banking and Bill Pay is a two-way mobile banking and bill pay product suite that encompasses the three modes of mobile banking " SMS/text, mobile Web and downloadable application solutions. The solution takes advantage of a jointly developed offering by mFoundry and ClairMail that integrates ClairMail's two-way mobile banking and payments platform and SMS/text and mobile Web solutions with mFoundry's downloadable Spotlight application.

With this initiative, FIS says it will have a single platform to implement, manage and support for its clients.
